

A well known fact is that innovation spurs creativity. LED technology is widely acknowledged due to its properties: reduced energy consumption, extended durability, ample reliability, longer lifetime and comparable light quality in terms of colour rendition and output. Accordingly, such an innovation introduces to the architecture, design and engineering fields enormous creative and technical possibilities, which allows for the creation of new experiences.

This weeks newsletter special is a collection of the most inspiring LED applications available on Archello's database. By clicking on the collage you will be able to explore this collection. From here you can find out yourself some of the most groundbreaking, inspirational designs and applications fostered by the introduction of this lighting technology..
